

## Schneider Electric announces new Monitoring and Edge Control solutions for Commercial & Industrial Solar and Storage projects

Grenoble, 2018 June 15 – Schneider Electric, the global leader in digital transformation of energy management and automation announces the introduction of Conext™ Gateway and Conext™ Insight 2, next generation monitoring and control solutions for Commercial & Industrial solar and storage projects.

- **Fully compatible with Schneider Electric end to end architectures for increased performance**
- **Local and remote system management and live performance monitoring to maximize availability**
- **Multiple site management**

### Conext™ Gateway

The Conext™ Gateway provides local system configuration and management as well as live system monitoring. Installers can benefit from the Configuration Wizards that guides installers through the configuration of a new system step-by-step. The Conext Gateway's intuitive menu structures allow installers to fine tune system settings to meet their exact requirements. O&M staff can easily access the status of each device in the system from the power flow diagram. The event tracking and management features help guide users through faults or warnings resolution. Furthermore, with its advanced progress tracking functionality, the Conext Gateway simplifies firmware upgrade processes.

### Conext™ Insight 2

The Conext™ Insight 2, a web-based application especially for installers and operators who manage multiple sites. It provides advanced remote monitoring & system control and also facilitates remote firmware upgrades as well.

The Conext™ Insight 2 brings solar monitoring to a whole new level:

- **System overview** - The System Overview screen allows you to see active events, track power levels and see basic system information. A simple, useful snapshot of system performance.
- **Advanced battery monitoring** - Monitor battery bank voltage, temperature and SOC on Conext Insight 2 from anywhere in the world.
- **Detailed performance analysis** - Take a closer look at how your system is performing on our advanced performance analysis pages

*“Conext Insight 2 is designed to help installers and operators efficiently manage multiple solar and storage installations,”* says Evan Vogel, Vice president Marketing Solar Business. *“Because of that, we added more remote system control capabilities such as remote firmware upgrade, site configuration and user management.”* In addition to remote system control capabilities, another critical feature of the Conext™

Insight 2 is Advanced Multi-Site Management that allows site operators quickly compare key site information such as power production, savings and costs, and power usage.

To learn more about Conext™ Gateway and Conext™ insight 2, visit Schneider Electric Solar Event, Meet our experts and relax at Numetschek on June 20<sup>th</sup> and 21<sup>st</sup>. Numetschek is located next to H4 hotel and 6 min walk from the Messe.

## About Schneider Electric

Schneider Electric is leading the Digital Transformation of Energy Management and Automation in Homes, Buildings, Data Centers, Infrastructure and Industries.

With global presence in over 100 countries, Schneider is the undisputable leader in Power Management – Medium Voltage, Low Voltage and Secure Power, and in Automation Systems. We provide integrated efficiency solutions, combining energy, automation and software.

In our global Ecosystem, we collaborate with the largest Partner, Integrator and Developer Community on our Open Platform to deliver real-time control and operational efficiency.

We believe that great people and partners make Schneider a great company and that our commitment to Innovation, Diversity and Sustainability ensures that Life Is On everywhere, for everyone and at every moment.
